45 Paint

PREPARATION: WARNING! Removal of old paint by sanding, scraping or other means may generate dust or fumes that contain lead. Exposure to lead dust or fumes may cause brain damage or other adverse health effects, especially in children or pregnant women. Controlling exposure to lead or other hazardous substances requires the use of proper protective equipment, such as a properly fitted respirator (NIOSH Approved) and proper containment and clean up. For more information, call the National Lead Information Center at 1-800-424-LEAD (in US) or contact your local health authority.

Surface must be free of grease, rust, dirt and wax. Mask off or protect other areas from overspray. Product should be sprayed in a well-ventilated area. Use at room temperature 21 °C (70 °F) for best operation.

FOR BEST RESULT: Shake until ball inside can rattles. Hold can at top, and swing bottom of can in a circle for at least 2 minutes, making ball travel around bottom groove. Shake up and down occasionally. Repeat shaking procedure for 10 seconds after each minute of spraying. Press spray button firmly, with the can 15-25 cm (6-8 inches) from surface. Apply several thin coats. To prevent clogging, clear the valve by holding can upside down, and spray until only clear gas comes out.

PRÉPARATION : MISE EN GARDE ! L'enlèvement des anciennes peintures par ponçage, décapage ou toute autre méthode risque de dégager des poussières ou des vapeurs contaminées par le plomb. L'exposition à ces poussières ou vapeurs peut entraîner un dysfonctionnement du cerveau ou d'autres effets néfastes sur la santé, surtout chez les femmes enceintes et les enfants. L'utilisation d'équipement de protection approprié, tel qu'un appareil respiratoire bien ajusté et homologué par le NIOSH, ainsi que des moyens de confinement adéquats et un nettoyage conviennent de ces substances dangereuses. Pour obtenir plus de renseignements, communiquer avec le National Lead Information Center au 1-800-424-5323 (aux É-U) ou avec le service local de santé publique.

La surface doit être exempte de graisse, de rouille, de saleté et de cire. Masquer ou recouvrir les surfaces avoisinantes pour les protéger des survaporisations. Le produit doit être vaporisé dans un endroit bien aéré. Pour optimiser les résultats, utiliser à température ambiante 21 °C (70 °F).

POUR DES RÉSULTATS OPTIMUM : Agiter le contenant jusqu'à ce que la bille de mélange bouge librement. Ensuite, tenir la canette par le haut et en agiter le fond pendant au moins 2 minutes en faisant des mouvements circulaires pour que la bille se déplace autour du fond de la canette. Agiter de haut en bas de temps à autre. Agiter pendant 10 secondes pour chaque minute de vaporisation. Presser fermement sur le bouton de vaporisation en tenant la canette à 15-25 cm (6-8 pouces) de la surface. Appliquer plusieurs couches minces. Pour empêcher le gicleur de s'obstruer, le nettoyer en tenant la canette à l'envers et en pressant sur le bouton de vaporisation jusqu'à ce qu'il n'en sorte que du gaz incolore.

339. Kit includes drive roller and two drive roller covers (MD #347339). Roller alignment must be checked and feed draper motor shim kit (MD #304748) installed if required.
340. Kit includes two covers (MD #347339), cam latch washer (MD #273304), and FL206 housing and bearing (MD #347487).
341. Housing (MD 347487) will not work without covers (MD #347339) and cam latch washer (MD #273304). If replacing superseded bearing housing (MD #335178), order FM100 Drive Cover kit (MD #347565).
342. Roller alignment must be checked and feed draper motor shim kit (MD #304748) installed if required. Misalignment of the feed draper drive motor and drive roller causes stress in the motor shaft and roller bore, leading to premature wear and failure. The kit provides the required shims when replacing a failed feed draper drive motor or driver roller, or to correct misalignment between the drive motor and drive roller. See instruction MD #215035 for installation. Includes eight 0.6 mm shims (NSS), eight 0.4 mm shims (NSS), 4 flange nuts (MD #21452), and 4 hex nuts (MD #135927).

Table 100.1 Configuration Chart

NOTE:

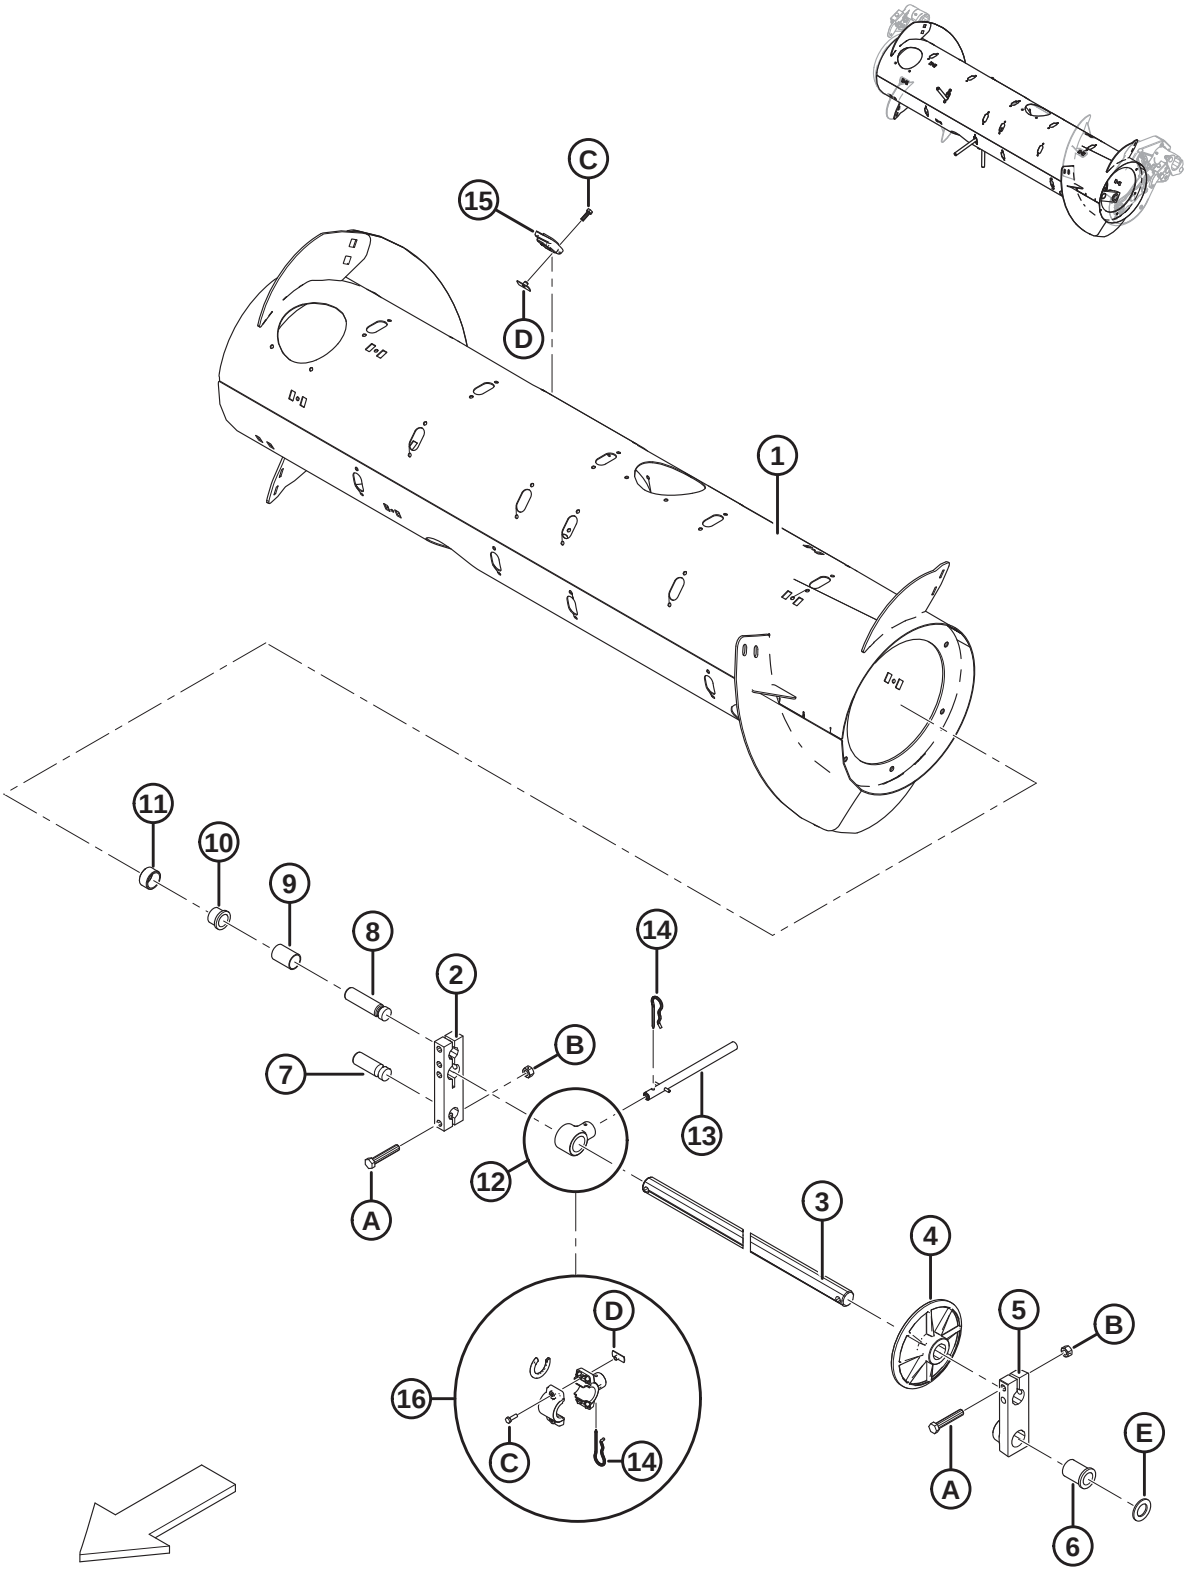

Auger drive assembly (MD #335242) is a base configuration **ONLY** and contains parts common to medium, wide, and narrow augers. Completion kits (MD #335244, 335245, or 308871) are optional as a repair and are required only if flighting components are damaged. To replace the entire auger assembly (including flighting components) for your specific combine, refer to the table below to determine which combination of base auger drive assembly (MD #335242) and completion kits (MD #335244, 335245, or 308871) is required. For completion kits service parts, refer to Section *99 Auger Assembly and Completion, page 301*.

NOTE:

For combines where completion kit (MD #335245) is available as an option, completion kit (MD #335244) is recommended for most crop conditions but completion kit (MD #335245) may increase combine capacity on wide feeder house combines in high volume crop conditions.
